Overview

California Emerging Infections Program (CEIP)

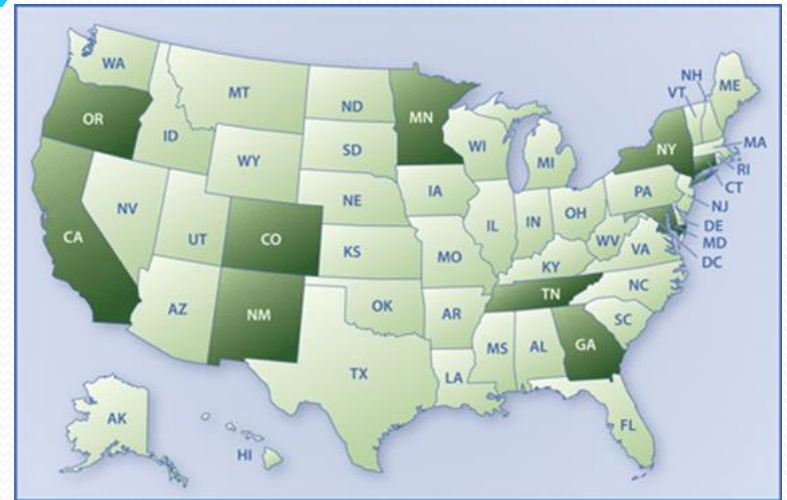

California Emerging Infections Program(CEIP)

CDC's Division of Preparedness and Emerging Infections

10 EIP Sites

CEIP

2022 MPOX Outbreak

32, 063 cases nationally

~ 6, 192 cases in California

**~ GBMSM and HIV
communities @ risk**

Overview

Study implemented in 2022, ongoing in 2024

GOAL: Evaluate JYNNEOS vaccine effectiveness

12 EIP sites

CEIP catchment area

- Alameda, Contra Costa, San Francisco

Objectives

Primary Objective

- Estimate the effectiveness of JYNNEOS MPX vaccine in preventing MPX infection among at risk communities.

Secondary Objective

- Estimate vaccine effectiveness by other factors of public health importance:
 - Route of administration
 - Number of doses
 - Timing of doses
 - Age groups
 - Immunocompromised status
 - Clinical endpoints

Participation Requirements

Sexually active persons aged 18-49 years who self-identify as MSM or transgender.

Cases who had a probable *Monkeypox virus* or *Orthopoxvirus* diagnosis on or after August 19, 2022.

Controls who had a sexual health, HIV care, or HIV PrEP clinic visit on or after August 19, 2022 (with no previous mpox diagnosis).

Residents of CEIP's catchment area which includes Alameda, Contra Costa, and San Francisco counties at the time of diagnosis/clinic visit.

Study Process

Recruitment

- Cases received from CDPH
- Controls identified through Qualtrics Eligibility Screening Form (HIPAA compliant)

Enrollment

- Max 5 contact attempts
- Study consent through DocuSign

Data Collection & Survey Wrap Up

- Phone interview
- REDCap
- Data is de-identified
- Gift Card Sent
